Special Note to Pricing: For agencies with greater than 500 utility accounts, SchoolDude will provide a special quotation for that agency.

If organization signs up by November 18, 2003, the annual fee and the startup costs are discounted by 50%. The discounted annual fee is maintained for 5 years.

SCEO will pay the discounted startup cost.

Cost per agency for weather station setup: There is a one time fee of \$250 for setting up weather information. Ongoing updates are included in service fees.

Conversion of baseline data from FASER: One site visit is conducted by SchoolDude personnel at agency location to interview client and to perform necessary exports through FASER application. The cost would be \$250 plus a per meter fee that is generally less than \$7.50 per meter; exact pricing to be quoted by SchoolDude for each organization. **SCEO will pay up to \$1,000 for conversion of one year of FASER data. If the organization decides to create a baseline data set by entering its FY'03 utility data in Utility Direct rather than by converting its FASER data, the SCEO will pay up to \$1,000 for the first year's annual subscription fee.**

OR

Creation of 12-month historical baseline from utility bills: SchoolDude will create baseline from copies of utility bills or electronic reports for \$15/utility meter. **SCEO will pay up to \$500 toward cost of baseline data entry by SchoolDude. If the organization decides to create the baseline by entering FY'03 utility data in Utility Direct using its own personnel, SCEO will pay up to \$500 for the first year's annual subscription fee.**
